HORIZONTAL REMOTE RADIATORS

HFU SERIES

AR Industrial is a world leader in the design and development of custom built cooling systems, capable of operating in the most arduous environments.

Working closely with each client, ARI specialise in developing a tailored cooling solution to meet each set of unique requirements.

Our range of Horizontal remote forced draft radiators can accommodate various applications including:

- > High air flow for high ambient conditions
- > Low operating noise for built-up areas
- > Low parasitic loads, meaning less power consumption
- > Multiple cooling circuits, high and low temperature (engine jacket & water aftercooler)
- > Low profile designs for roof and canopy mounting

Forced draft radiators offer an economical cooling solution.

This style of radiator is available in units up to 11 metres in length.

All Horizontal remote radiators are designed in accordance with conventional transport constraints, allowing the radiators to be shipped in containers or via road transport.
