

Service & Repair **Industrial & Power Generation**

OEM Level Service, Repair and Overhaul for Industrial and Power Generation Cooling Systems

COOLING SYSTEM APPLICATIONS

Air Radiators supports critical cooling systems across a wide range of industrial and power generation applications, including:

**Skid Mounted
Pump & Gensets**

**Containerised
Gensets**

**Data Centre
Standby Gensets**

**Mine Site
Power Stations**

**Remote Community
Power Stations**

PROTECT UPTIME WITH OEM-LEVEL SERVICE & REPAIR

Downtime costs more than money — it can impact your reputation, brand and customer confidence. Air Radiators provides specialist overhaul, refurbishment and maintenance backed by local service experience and original equipment knowledge.

From cleanouts and assessments to full rebuilds, we help restore cooling system performance, extend service life and reduce total cost of ownership for critical industrial and power generation equipment.

DEFINED BY OUR **QUALITY**, DRIVEN BY **SERVICE**.

SERVICE & REPAIR CAPABILITIES

We restore cooling package performance through specialist factory repair, testing and component support, including:

- **Inspection, assessment & overhaul reporting**
- **Pressure testing & leak detection**
- **Upgrade & modification of cooling packages**
- **Soldering, silver soldering & brazing**
- **Chemical flushing of oil coolers & intercoolers**
- **MIG, TIG and aluminium welding**
- **Supply of cooling system components**
- **Custom fan supply and replacement**

FIELD SERVICE SUPPORT

Our field service team provides on-site advice, inspection and rapid technical support for Air Radiators products. We also offer OE installation, commissioning and maintenance guidance, helping troubleshoot complex field issues, maximise uptime and keep critical cooling systems operating reliably.

Field support includes:

- Support for application, installation & commissioning
- Rapid response to service issues
- On-site technical advice & troubleshooting
- Local service capability for faster response times

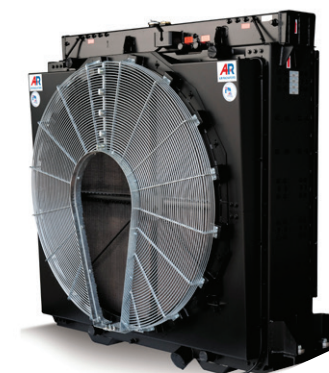

PURPOSE-BUILT PERTH SERVICE FACILITY

Air Radiators Perth Airport facility gives Western Australian customers local access to dedicated cooling component service and repair capability. With more than 2,000 m² of specialised workshop and wash bay space, the facility is equipped for inspection, cleaning, repair, testing and overhaul of heavy-duty cooling packages.

HEAVY-DUTY CORES, PARTS & COMPONENTS

Heavy-duty Australian-made core options, supported by a broad range of replacement parts and components from Air Radiators' manufacturing network, help deliver the durability, reliability and service life required for demanding industrial and power generation applications.

QUALITY - IT'S IN EVERYTHING WE DO

Air Radiators operates under an ISO 9001-certified Quality Management System, with controlled processes supporting design, manufacture, service and repair.

Our commitment to quality, customer trust and continuous improvement helps ensure every service outcome is completed with care, consistency and technical accountability.

ABOUT AIR RADIATORS

Air Radiators is part of the Australian-owned Adrad Group and a specialist designer, manufacturer and service partner for heat transfer and air movement solutions.

With more than 50 years of experience, we support demanding industries including power generation, mining, heavy transport, rail, defence and process cooling.

Our engineering, applications, manufacturing and after-sales teams work together to design, repair and maintain tailored radiator and cooling systems for complex operating environments. By combining advanced technologies, original equipment knowledge and practical field experience, we help customers improve reliability, reduce downtime and achieve a lower total cost of ownership.
